

Lê Quốc Khánh

Intern .NET Developer

✉ lqkhanh292005@gmail.com ☎ 0911887141 📍 Ho Chi Minh, Vietnam

OBJECTIVE

As a third-year **Software Engineering** student, I am actively seeking an internship opportunity as a Backend Developer (.NET). With a solid foundation in .NET Core, RESTful APIs, and SQL Server, I am eager to apply my academic knowledge to real-world projects. I am a quick learner and a collaborative team player committed to delivering high-quality code and continuously improving my technical skills

EDUCATION

FPT University

Sep 2023 - Sep 2027

- *Major: Software Engineering*
|.NET Developer

ACTIVITIES

Coc Sai Gon Communications Club

Nov 2023 - Now

- *Management*
Support the Executive Board in developing strategies and managing internal operations to ensure the stability and growth of the club. Directly lead the planning and implementation of monthly recurring events, closely controlling the entire process from brainstorming ideas, budgeting, to coordinating logistics and onsite event management.

SKILL

Programming Languages	C#, Java, JavaScript
Frameworks and Libraries	.NET Core, Entity Framework, ReactJS, Bootstrap, JSP/Servlet
Database	SQL Server
Tool	Git, GitHub, Postman, Swagger

PROJECT

EV Charging System

- *Back end Developer, Leader Team*
Project Description
Engineered the backend for SkaEV, a comprehensive EV charging platform. Delivered core modules for bookings, real-time SOC tracking, QR workflows, and dynamic invoicing. Implemented secure JWT/BCrypt authentication and ensured high availability using SignalR for real-time updates and Stored Procedures for complex transaction handling.

Key Responsibilities

- Designed and implemented RESTful APIs (Auth, Stations, Bookings, Charging Sessions, Admin) with ASP.NET Core 8; separated business logic via service/repository/DTO layers.
- Built EF Core DbContext mapping 16 tables and integrated 15 stored procedures; optimized DB and EF queries for performance.
- Implemented JWT authentication with role-based access (customer/staff/admin), BCrypt password hashing and token refresh flow
- Integrated SignalR for real-time SOC/charging updates and handled concurrency/race conditions for slot reservations.

Technologies Used: ASP.NET Core 8 (C#), Entity Framework Core + Microsoft SQL Server, JWT / BCrypt (Authentication & Security), SignalR (Real-time updates)

Event Department Web

Developer

Project Description

Engineered a comprehensive event operations platform for Coc Sai Gon, integrating modules for vendor management, automated contracts, and AI tools. Built on FirebaseFirestore for real-time capabilities

Key Responsibilities

- React app + Firebase integration
- Database + Authentication
- Vendor & Member management
- Image processing + Document generation
- Dashboard + Admin features

Technologies Used: React, Firebase, Material-UI + Ant Design, React Router DOM 6.20.0

Link Website: <https://event-department-web.vercel.app/>

FlappyBird Game

Developer

Project Description

Desktop Flappy Bird built with WPF on .NET 9, organized in layers (UI, business services, data repository). Implements game loop, canvas rendering, animation, skins, audio, settings and high-score persistence.

Key Responsibilities

- Layered architecture: UI (PRN212.G5.FlappyBird), Business (FlappyBird.Business), Data (FlappyBird.Data)
- Audio effects and game state sounds (jump, point, fail)
- Settings UI (pipe speed, volume) and high-score saving
- Implement game loop, physics, and collision detection

Technologies Used: C#, .NET 9, WPF (XAML)
